Project Proposal Format

- **App Name**= "Hawassa Connect"
- **Tagline**: "Your city's inventory in your pocket find it locally, buy it personally."
- **Problem Statement:**

In Hawassa, buyers often spend hours traveling between Piazza, Tabor, Gebeya and other places to find specific goods (electronics, clothing, or spare parts). Because local shops lack a digital presence, buyers cannot compare prices or confirm stock without physical travel. This results in wasted transportation costs (Bajaj/Taxi), consume your timeand energy ,unnecessary urban congestion, and "information asymmetry" where buyers often overpay because they don't know a better price exists just a few blocks away.

- **Brief User Persona**

The Buyer: Mulugeta, a 22-year-old student at Hawassa University needs a specific laptop charger. Instead of spending 50 ETB on Bajaj rides and losing his priceless time to check five different shops in Piazza, he wants to see which shop has it and for how much before he leaves his dorm.

The Seller: Abebe, a small electronics shop owner in Tabor, has great prices but loses customers to bigger shops because people don't know his current stock.

- **Proposed Solution**

Hawassa-Connect is a "Local Inventory Discovery" app. It allows sellers to list their current stock and prices in a digital storefront. Buyers can search for items by category or location, compare prices, and get the shop's exact location and contact info. The app facilitates the discovery and decision-making online, while the transaction remains a safe, physical exchange at the shop.

- **Core Features** (MVP)

Seller Inventory Management: A simple interface for shop owners to add/edit products, prices, and photos.

Search & Filter Engine: Buyers can search for products and filter by "Sub-city" (e.g., Piazza, Tabor, Tula) and "Price Range."

Seller Profile & Contact: A page for each shop showing their phone number, Google Maps location, and "Call to Confirm" button.

Product Catalog: A feed of recently added items in Hawassa to encourage local discovery.

- Team member and Role

UI/UX Lead: [Dawit Belete & Asfawesen Temtem]

Database & State Lead: [Surafel Tesema]

Core Logic & Services Lead: [Surafel Andualem]

Network & API Lead: [Bereket Mulgeta]

DevOps & Testing Lead: [Amanuel Tesfaye]
